INFORMATION PANE

1

Place the object in a room
with white and diffused light.
Stay away from windows or sunlight.

2

SCAN Press the Scan button.

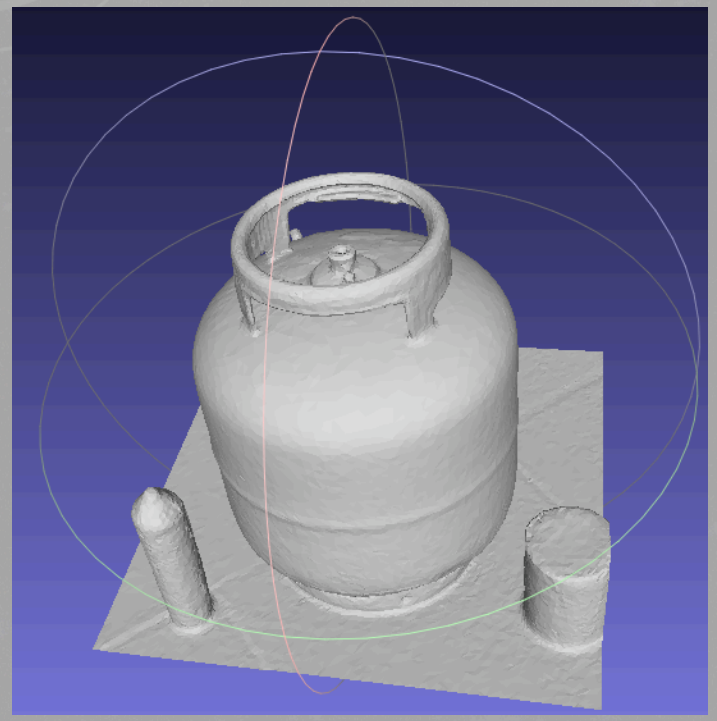

SCAN CAD

3

Using tweezing motion, adjust the white box around the object so it contains the entire asset within its perimeter.

Don't leave the box too wide or too tight.

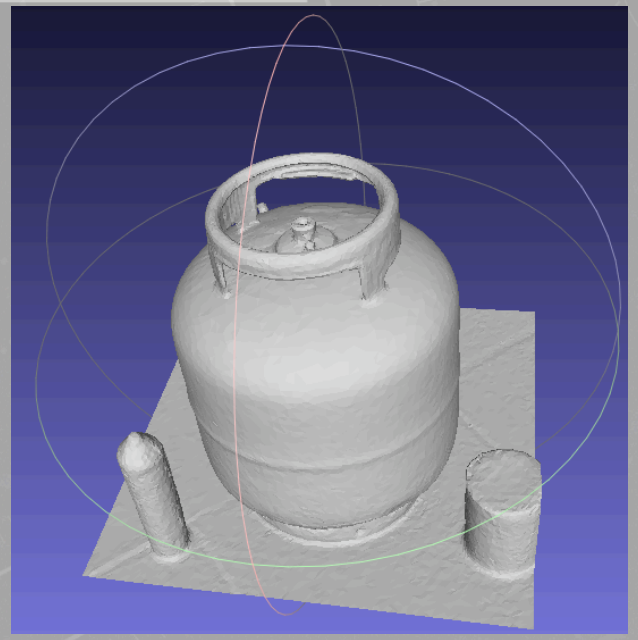

4

Start the scanning process slowly and steadily, circling the object 360 °

Make sure the whole object, including the top, is being "painted" in white.

SCAN CAD

5

Choose Autocad (*.dwg*) or Sketchup (*.skp*) format and proceed to the checkout.

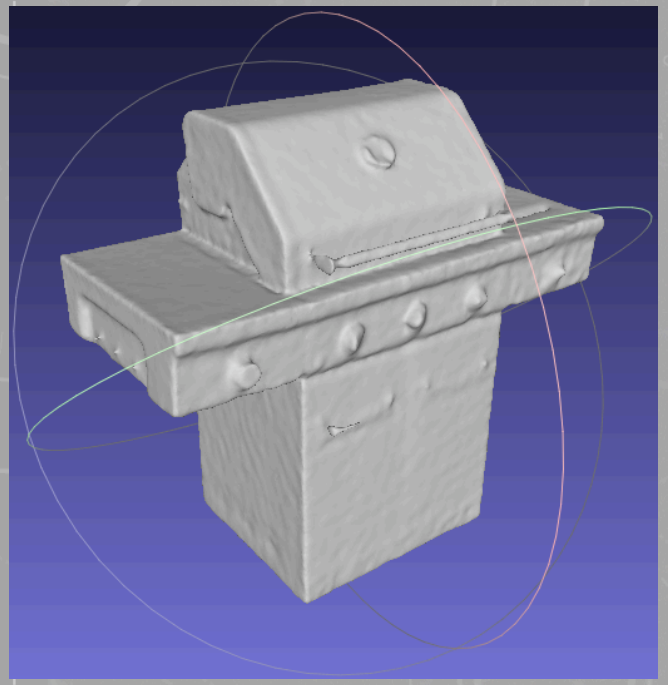

After the payment, if you want to share with us informations such as: brand, model, measurements and photos of the products, this can bring even more precision to your CAD file. In this case, send the information and attachments to the email *support@scancad.tech* after the payment.

In less than 24 hours, we will send you the file in the chosen format together with the 3D mesh in *.obj* format.
